

Done All points before Submit the Project.

- Every project should have its style guide before starting the project.
- [example style guide](#)
- Should have meaningful class names.
- Try to make the layout first before adding elements.
- Read the documentation before using any library to ensure how it will work. [Eg. Slick Slider, Tailwind CSS etc.](#)
- If any class or CSS value is already available in any library doesn't make any class for the same like bootstrap has an fw-normal class for font-weight 400

```
.fw-normal {  
  font-weight: 400 !important;  
}  
  
.fw-medium {  
  font-weight: 500 !important;  
}  
  
.fw-semibold {  
  font-weight: 600 !important;  
}  
  
.fw-bold {  
  font-weight: 700 !important;  
}
```

DO

- Add comments like this for different sections or different sections' CSS.

- ```

<section class="viewport">
 <div id="scroll-container" >
 <!------- HERO-SECTION ----->
 <section class="bg-img overflow-hidden position-relative">...
 </section>

 <!------- ABOUT-SECTION ----->
 <section class="bg-color-primary overflow-hidden about" id="about">...
</section>

 <!------- CHARACTER-SECTION ----->
 <section class="bg-character Characters position-relative overflow-hidden" id="">...
</section>

 <!------- VIDEO-SECTION ----->
 <section class="video" id="future-trailer">...
</section>

 <!------- 9CARD-SECTION ----->
 <section class="py-xxl-5 card-section position-relative">...
</section>

 <!------- ROADMAP-SECTION ----->
 <section class="roadmap-section position-relative" id="roadmap">...
</section>

 <!------- OUR-TEAM-SECTION ----->
 <section class="position-relative team-section bg-our-team" id="our-team">...
</section>

 <!------- FOOTER-SECTION ----->
 <footer class="pb-xxl-5 pb-4">...
</footer>
</div>

```

- ```

/*===== FONT-WEIGHT SIZE CLASS START ===== */
.fw-normal {
  font-weight: 400 !important;
}

.fw-medium {
  font-weight: 500 !important;
}

.fw-semibold {
  font-weight: 600 !important;
}

.fw-bold {
  font-weight: 700 !important;
}

.fw-ex-bold {
  font-weight: 900 !important;
}

/*===== COLOR CLASS START ===== */
.text-pink {
  color: var(--color-pink) !important;
}

.text-white {
  color: var(--color-white) !important;
}

.text-black {
  color: var(--color-black) !important;
}

/*===== BACKGROUND-COLOR CLASS START ===== */
.bg-color-white {
  background-color: var(--color-white) !important;
}

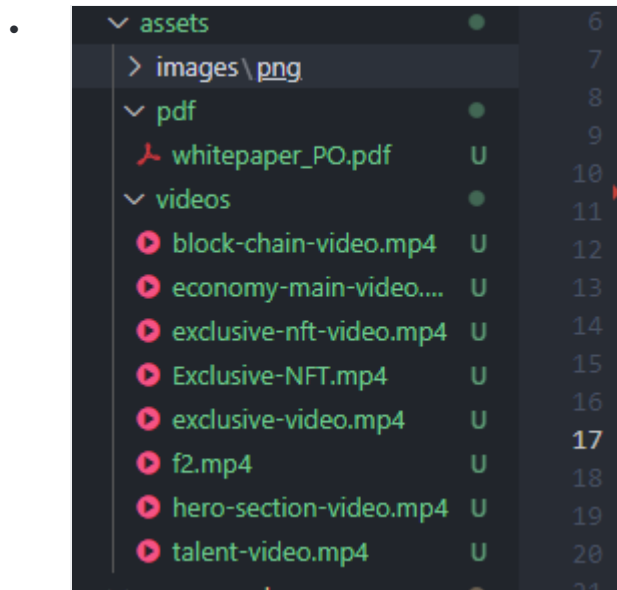

.bg-color-black {
  background-color: var(--color-black) !important;
}

/* ===== COMMON CLASS START ===== */
.main-heading {
  font-size: var(--font-xxl);
  font-weight: 900;
}

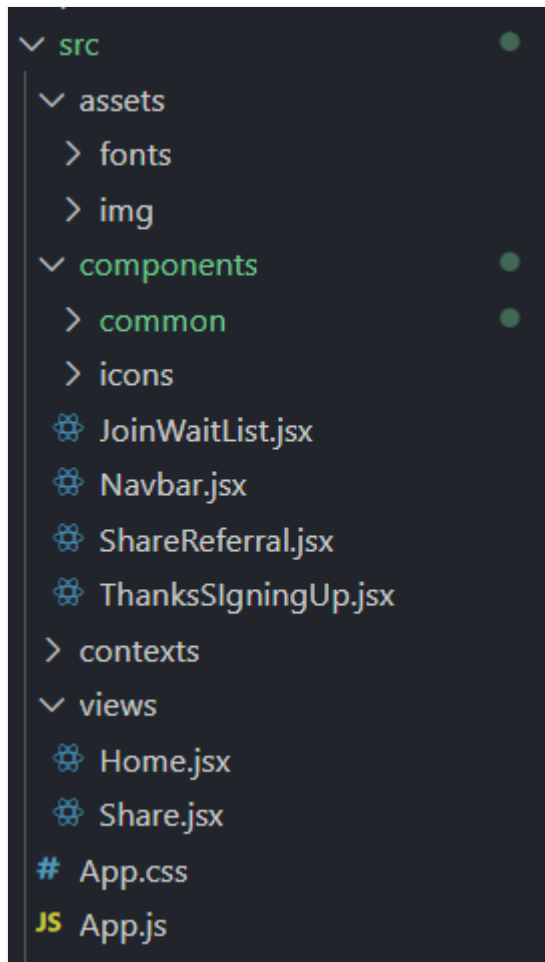

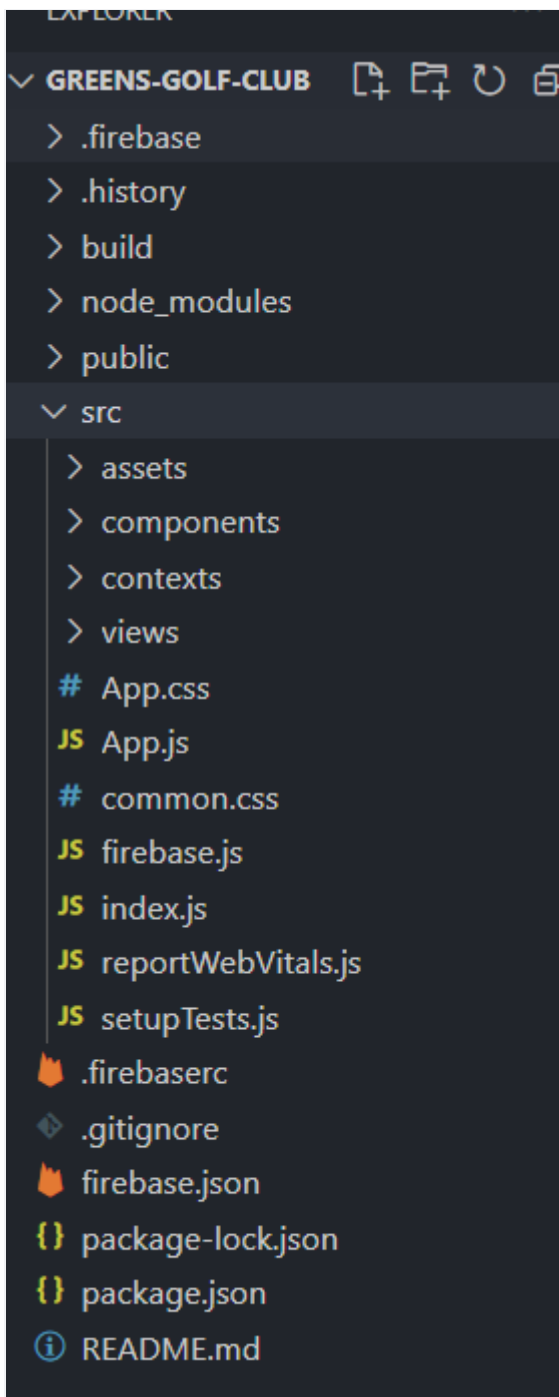

```

- Add Favicon by using the Favicon generator <https://www.favicon-generator.org/>
- Make sure favicon should be visible in all themes
- Add Meta tags in <Head /> using <https://metatags.io/>

- if you complete one section or fix any bug page push or commit your code from time to time not after done the page.
- **example: If you have made any changes in the navbar, commit 'Navbar modification' or 'any change in navbar.'**
- Add Animation needed to look good, on the website using AOS or Animate.css.
- Every image, file, folder, component, etc. should have a meaningful name. not like ramesh.html or Group14.png.
- **example**
- For React Name Properly File name Don't use Single word for filename →
- **example: Write InspirationCard instead of Inspiration.**
- **Don't Do These** `Links.jsx` OR `Slider.jsx`
- Create a repository in lowercase.
- **example**
- videos should be in the videos folder.
- 
- Don't add a component in the Views folder, it should be in the components folder.
- **example**
- ```
import { WhitepaperBtn } from "../common/icons";
import HeroVideo from "../../assets/videos/hero-section-video.mp4";
import HeroPoster from "../../assets/images/png/hero-poster.png";
import PDF from "../../assets/images/whitepaper_P0.pdf";
```
- You can use this folder structure for assets.

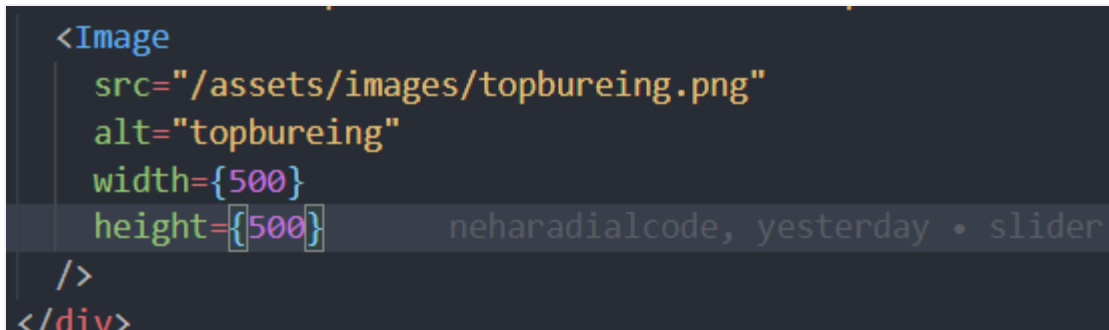

- Add social media links with a target blank.
- If you are using a tag with target blank, the console gives you an error, you can remove the error by using this attribute `rel="noreferrer"`
- `example`
- If you are working on HTML Project there should be index.html and style.css. No extra CSS files.
- For React Project You can check the attachment below.

## FOR NEXT JS

- If you are working on NEXT.JS use Next/Image provided by Next.js --see attached.

- Don't use single or short name classes - try to use some more significant and relatable classes for `example: .contact_card, faq_heading, etc.`

```
lg-start footer-social-icons list-unstyled">
ow/login"><img
```

- footer-social-icon, These class names are not collapsed with other class names.
- `Don't do this`

```
<p class="advisor">Advisor</p>
```

## FOR GITHUB AND CLICKUP

- If you start a Project Add a GitHub repo and Live preview link on the description of Click up the task.
- If you have done any project --Add a Task in review or add a proper comment on Click up. Suitable comment means explained about what you have done.
- Fill alt attributes with relatable words in all images.
- Manage spacing and font size on the small screen
- Use SEO elements or tags e.g → Use heading tags for heading
- Try to write a proper commit and then push your code

```
> git add .
> git commit -m 'team section added '
tions(-)
```

- Remove unused code before submitting your project
- Don't Say "Ho Gya", be All the points made above in the document.
- Be responsible for doing your project on time.
- Ensure text remains visible during the Webfont load.
- `example: Add some default fonts or add font-display : swap`
- Check the performance of the webpage you are working on and it must be 90% or more than 90% by using the lighthouse or google page speed insights
- `example: https://pagespeed.web.dev/`

## FOR LIGHTHOUSE

- members should know about accessibility, performance, best practices, and SEO.

- lighthouse values should be above 90%.
